

Sr. Java Developer

Vcommerce is looking for a full time Sr. Java Developer to implement world-class ecommerce solutions as well as help to extend our industry leading web-based ecommerce platform. The desired candidate must be self-motivated, creative, passionate and able to fit into the fast paced dynamic environment. The position will require constant contact with developers, designers, project managers, and product managers.

Vcommerce is the leading provider of ecommerce and fulfillment solutions for retailers such merchants as MTV, Target, Newegg.com, Overstock, Napster, eToys Direct, and David's Bridal.

Responsibilities include:

- Design and development of scalable, fault-tolerant, server-side Java applications
- Design and documentation of external interfaces as XML documents
- Collaboration with product managers, operations, and other members of the team in requirements specification, testing requirements, and release planning
- Architecture, design and implementation
- Database design and manipulation

Required Skills & Experience:

- 5+ years of commercial server-side development and architecture experience in Java (preferably on Linux)
- Worked on a large scale online transactional processing enterprise application
- Strong object-oriented analysis and design skills
- Strong familiarity with XML concepts and Java XML APIs
- Must be able to understand business processes in a typical enterprise solution and break them down into necessary application components
- Good communication and personal skills: ability to interact and work well with members of other functional groups in a project team
- Familiarity with Java testing tools, especially JUnit, and ability to write testable code
- Experience developing in a n-tier environment & J2EE
- Experience in advanced web user-interface design and frameworks (e.g. Struts, JSTL, JSP Tag Libraries, etc.)
- Advanced working knowledge of HTML, DHTML, CSS & JavaScript programming
- Strong knowledge of SQL and database schema design

Desired Skills:

- Strong background in systems with a commerce focus is strongly preferred
- Experience with EDI concepts and tools. (e.g. Sterling Commerce GIS)
- Experience with payment processing systems (e. g. Cybersource)
- Experience developing in global, multi-currency, multi-language environments is preferred
- Experience with Servlet containers and Application Servers. (e.g. Tomcat, JBOSS)
- Experience with MicroStrategy reporting tool
- Experience with Macromedia Flex development
